

The Municipality of Burgas has bought a modern urological research device for UMHAT - Burgas

Tuesday, 01 June 2021

The device is a system of large-scale visualization of Uromic blues, with the help of which an accurate visual diagnosis of the urinary tract and kidneys is carried out. Burgas is the only city outside the capital that has a similar device, which improves the quality of medical care in the city and the region. Accurate research will also provide the opportunity to conduct scientific activities in a medical institution.
